

Recombinant Mouse FGF-acidic
(Fibroblast Growth Factor acidic)

Catalog Number: 200-48
Accession Number: P61148

Specifications and Uses:

Alternate Names: FGF1, HBGF-1, Beta-endothelial growth factor, ECGF-beta

Description:

Fibroblast Growth Factors, FGFs, are a 22 member family of proteins known to be involved in angiogenesis, wound healing and embryonic development. As a family, they bind to heparin and signal through four receptor tyrosine kinases called, FGFR1, 2, 3 and 4. FGF-acidic, or FGF1, is a particularly potent inducer of DNA synthesis and has chemotactic activities. Recombinant mouse FGF-acidic is non-glycosylated protein, containing 141 amino acids, with a molecular weight of 15.9 kDa.

Source: *E.coli*

Physical Appearance: Sterile filtered white lyophilized (freeze-dried) powder.

Formulation and Stability:

Recombinant mouse FGF acidic is lyophilized at a concentration of 1 mg/mL in 5 mM Na₂PO₄, pH 7.5 and 50 mM NaCl. Lyophilized product is very stable at -20°C. Reconstituted material should be aliquoted and frozen at -20°C. It is recommended that a carrier protein (0.1% HSA or BSA) is added for long term storage.

Reconstitution:

Centrifuge vial before opening. When reconstituting the product, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution. It is recommended to reconstitute the lyophilized product with sterile water at a concentration of 0.1 mg/mL, which can be further diluted into other aqueous solutions.

Protein Content and Purity (typically ≥ 98%) determined by:

Reducing and Non-reducing SDS-PAGE

Endotoxin Level:

Measured by kinetic LAL analysis and is typically ≤ 1 EU/μg protein.

Biological Activity:

The activity is determined by the dose-dependent proliferation of mouse BALB/c 3T3 cells and is typically less than 0.2 ng/mL.
