Mouse Laminin I

Catalog #: 3400-010-01

Size: 1 mg

Description: This highly purified preparation of mouse laminin I increases cell adhesion, migration, growth, and differentiation. It is composed of $\alpha 1\beta 1\gamma 1$ chains with a total Mr of 800,000 and is used for coating culture dishes.

Source: Murine Engelbreth-Holm-Swarm (EHS) tumor.
Storage Buffer: Dulbecco's Modified Eagle's Medium with 10 μ g/ml gentamycin sulfate.
Storage: Store at -20°C or -80°C in a manual defrost freezer.
Purity: Purity >90% by SDS-PAGE.

Specifications:

Functional Assays:

- Supports the attachment (at least 50%) of MG63 human osteosarcoma cells to a laminin-coated plate at a coating solution concentration of 20 μ g/ml.

Sterility Testing:

- No bacterial or fungal growth detected after incubation at 37°C for 14 days following USP XXIV, Chapter 71 sterility testing.
- No mycoplasma contamination detected by PCR
- Endotoxin concentrations < 20 EU/ml by LAL assay.

Coating procedure:

The recommended working concentration is 0.05-10 μ g/cm² of growth surface (0.05 -20 μ g/ml) depending on cell type.

A. Thaw stock solution on ice for several hours. In a laminar flow hood, dilute appropriately with cold serum-free, cell culture medium. Mix and transfer to the wells of tissue culture plates. Spread the solution to completely cover the bottom of the wells.

B. The following table is a guide for the suggested volumes required per well:

Plate type/	Volume Laminin per Well
6 wells (or 35 mm dish)	2 ml
24 wells	1 ml
48 wells	200 μ l
96 wells	100 μ l

C. Incubate the plates at 37°C from 4 hours to overnight. In the laminar flow hood, remove excess liquid from the wells of the tissue culture plate.

D. Rinse the wells once with cell culture medium and then add your cells.
