### DESCRIPTION:

The recombinant Blue Fluorescent Protein (BFP) is expressed and purified from transformed *E. coli* using a method that ensures high purity and maximal BFP fluorescence. The protein is a 29 kDa monomer with 259 amino acids, pI: 6.17. Ex.= 308-383 nm; Em.= 440-447 nm. The protein is engineered with 6xHis-tag on the N-terminal, which can be used for detection with anti-His-Tag antibody, or protein removal by using Ni<sup>2+</sup> beads. ### APPLICATIONS:

The protein is suitable as a control reagent for BFP expression studies or as a labeling reagent. Applications include: Use as standards for SDS-PAGE, Western blot analysis of BFP transfected cells, label other proteins, calibration of fluorometers and flow cytometers, fluorescence microscope, or microinjection of BFP into cells and tissues, etc. The recombinant BFP is ideal for fusion tag applications and is perfect for triple labeling with EGFP (Cat.# 4999-100), RFP (Cat.# 4997-100), YFP (Cat.# 4998-100), or any other dyes. The 6XHis-Tag on the N-terminal can be used in Western blot detection with 6XHis-tag antibodies. The 6XHis-tag can also be used in removal or purification of the BFP.
