

DATA SHEET

Name: Hydroxystilbamidine, 4% in H₂O (equivalent to FluoroGold™)

Cat.# 80023

Description:

Hydroxystilbamidine has been used extensively as a retrograde tracer for neurons and also a histochemical stain. The 4% solution in deionized H₂O is a more convenient, ready-to-use form. If desired, the solution can be diluted to a lower concentration. For most of the applications, the typically dye concentration is 2% to 4%.
