

Anti-Human ULBP1 Monoclonal Antibody AUMO2

Antigen:	Human ULBP1 (UL16-binding protein 1)	
Clone:	AUMO2, mouse IgG2a	
Catalog Number:	AUMO2-100	
Specificity:	binds: ULBP1 binds not: ULBP2, ULBP3, ULBP4	
Epitope:	in ULBP1 ectodomain	
Applications:	Flow cytometry	
Size:	100 µg, 1.0 mg/ml, in 0.1 ml phosphate-buffered saline, pH 7.4 with 0.05% sodium azide (Caution: Sodium azide yields highly toxic hydrazoic acid under acidic conditions. Dilute azide compounds in running water before discarding to avoid accumulation of potentially explosive deposits in plumbing).	
Usage:	In general, for flow cytometry we recommend a final dilution of 10µg mAb/ml and for ELISA 1-10 µg mAb/ml.	
Purification:	Protein A affinity chromatography	
Storage:	Store at 4°C. For long-term storage freezing at -80°C is recommended.	
Description:	<p>UL16-binding proteins (ULBP) have been discovered in 2001 during a search for human proteins binding the Human Cytomegalovirus-encoded UL16 glycoprotein [1] and for human homologues of the mouse RAE1 ligands of NKG2D, respectively [2]. ULBP1-4 are cell surface proteins with an MHC class I-like $\alpha 1/\alpha 2$ superdomain that is bound by human NKG2D [1-3]. ULBP1-3 are attached to the cell surface by GPI-anchor [1]. Expression of ULBP1-3 is induced by infection with Human Cytomegalovirus (HCMV) [4]. In vivo expression of ULBP1 is mostly unexplored, except that freshly isolated leukemias have been shown to express ULBP1 [5]. Recent studies document ULBP1 expression on Dendritic Cells and ULBP1 representing a dominating activating NK ligand on mycobacteria-infected macrophages [6,7]. Like other human and mouse NKG2D-ligands, ULBP stimulate tumor immunity in vivo [8].</p>	
Conditions:	<p>For research use only. Not for use in diagnostic or therapeutic procedures. BAMOMAB is not responsible for any patent infringements caused by the use of this product.</p>
