

Human Interferon Alpha (hIFN- α) ELISA Kit

- Catalog Number:** CK2001-1 **Size:** 1 single-plate kit
- Lot Number:** 2198
- Storage Conditions:** Keep at 4°C for greatest stability.
- Range:** 10-500 pg/ml for the high sensitivity protocol. 40-5000 pg/ml for the extended range protocol.
- Speed:** Incubation time, 3 hours 15 minutes.
- Specificity:** Human IFN- α A, α 2, α A/D, α D, α K, and α 4b. No cross-reactivity with human IFN- γ or human IFN- β . No cross-reactivity with mouse or rat IFN- α , IFN- β , or IFN- γ .
- Specifications:** This kit quantitates human interferon alpha in serum or in media using a sandwich immunoassay.^{1,2} The kit is based on an ELISA with anti-secondary antibody conjugated to horseradish peroxidase (HRP). Tetramethyl-benzidine (TMB) is the substrate. All reagents are supplied. One pre-coated, microtiter breakaway strip plate (96 wells) is included.
- The specific activity of the interferon used as the standard in the kit is based on the international standard for human interferon alpha (hIFN- α) provided by the National Institutes of Health.³ A typical standard curve for each lot and a microtiter plate worksheet are included with the procedure. Please note that the concentrations of the detecting antibody and the HRP differ from lot to lot. The differences are the result of calibrating each kit for optimal sensitivity.
- Quality Control:** Standard written procedures are followed in the preparation of all ELISA kits. Each group of ELISA kits is assigned a lot number. Sample kits from each lot are retained for periodic evaluation. Kits are guaranteed for six months from the date of production.
