

StayBrite™ Highly Stable Luciferase/Luciferin Reagent

(Cat# K790-100, -1000, -10000; Store at -80°C)

I. Introduction:

BioVision's Highly Stable Luciferase/Luciferin Reagent utilizes a genetically modified variant derived from the Luciferase of *Diaphanes pectinealis* (Chinese Firefly) endemic to Yunnan province, China. BioVision's luciferase (rLucHS) has been modified to provide enhanced stability compared to the normal phenotype of *Photinus pyralis*, as well as a broader and more physiologically relevant effective pH range. At all pHs below ~ 8.2, rLucHS is significantly more active than commercial *Photinus pyralis* luciferase and is stable for weeks at room temperature and > 60 min at 37°C. The specific activity of rLucHS is ~ 5 x 10¹¹ RLU/mg protein. This reagent has application to measure ATP levels in a wide variety of biological samples such as cells, tissues and fermentation broth, etc.

II. Components:

Component	K790-100	K790-1000	K790-10000	Part Number
StayBrite™ Storage Buffer	1.2 ml	12 ml	120 ml	K790-xxx(xx)-1
rLucHS Reagent Mix	1 vial	1 vial	1 vial	K790-xxx(xx)-2

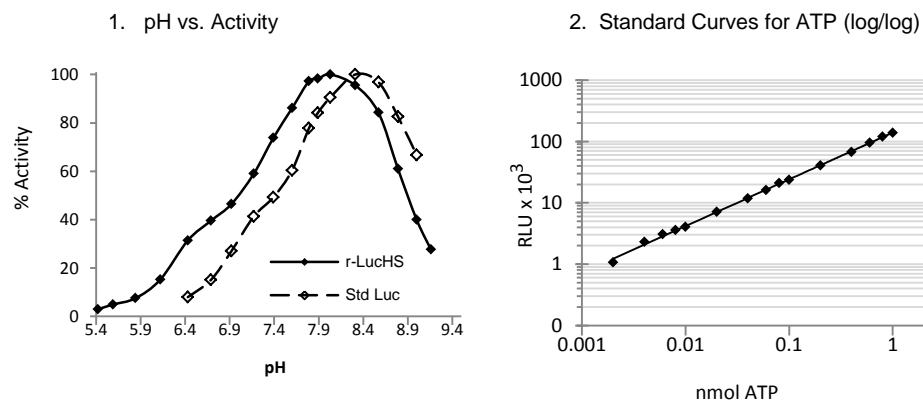

III. Storage and Handling:

- Store vials at -80°C, protected from light; good for 1 year.

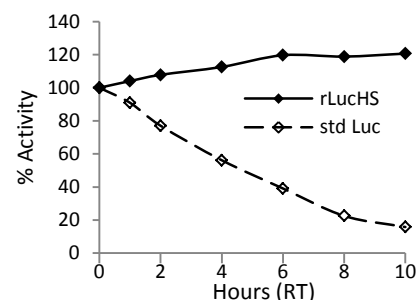

IV. StayBrite™ Highly Stable Luciferase/Luciferin Reagent Preparation:

- Reconstitute rLucHS Reagent Mix with StayBrite™ Storage Buffer (1.1 ml, 11 ml, or 110 ml, respectively, for the K790-100, -1000, -10000). The reconstituted reagent can be used for ATP assay or potentially other assays. The reagents can be stored at 4°C for 2 months at 4°C. For a detail ATP assay protocol, please refer to BioVision's Cat.# K791-100, -1000).

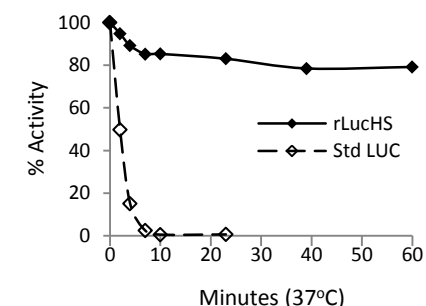

V. Selected Properties of rLucHS:

3A. Room Temperature

3B. 37°C

3. rLuvHS Stability at RT (3A) and 37°C (3B) vs. Standard Commercial Luciferase
