

Optima B Class Autoclave

Bench Top Autoclave

Overview

Flash Steam® Technology

The science behind Optima's high performance capability of sterilizing a full 6 kg load in as little as 22 minutes.

The large capacity yet small footprint makes Optima one of the most efficient autoclaves on the market.

Optima is a Type B vacuum autoclave for the sterilization of linen, wrapped (pouched), hollow or solid items. The vacuum unit removes all the air from inside the chamber. This process ensures perfect sterilization every time.

Features

Fast cycle times – rapid throughput saves manpower and reduces instrument inventory

Simple to use – the full colour menu display is intuitive and takes you through the process, one step at a time

Fully compliant to HTM 01-05 best practice guidelines (UK models)

Built in direct feed – connects to a suitable water system and also has a built in direct drain for maximum flexibility in siting

Features a single use water system – removes debris every cycle, reducing wear and tear on your instruments

Integral data logger for easy, recordable data capture

Superb engineering, design excellence and superior quality – designed and manufactured in the UK, Optima is fully tested and validated for real peace of mind
