

## Ready-to-use Rabbit Testis Paraffin Sections

**Catalog #:** TP-401

**Quantity:** 10 slides

**Storage Conditions:** Store slides at room temperature in a dry place or at 4°C in a sealed bag containing desiccant. Sections are good for 1 year of the date of purchase if stored properly.

**Applications:** Paraffin tissue sections are ideal for:

- Cellular localization of the protein of interest by immunohistochemistry.
- Cellular localization of the mRNA of interest by *in situ* hybridization or *in situ* PCR using both radioactive- and non-radioactive-labeled probes.

**Description:** Tissues are freshly harvested from adult New Zealand white rabbit tissues, fixed in 10% buffered neutral formalin and processed for embedding in low temperature melting paraffin. Tissue blocks are cut at a thickness of 5-7 and mounted on slides treated for adherence. Each slide contains 1 to 4 sections depending on the size of the tissue in the block. All tissue preparation steps from harvesting to embedding in paraffin are done in RNase-, DNase-, and protease-free conditions.

**Shipping:** Slides are shipped at room temperature in a slide mailer or slide box.

**Prior to use:** Remove paraffin by dipping slides in xylene or any substitutive agent (3 changes 5 minute each), rehydrate in serial ethanol dilutions, and finally wash with PBS. For *in situ* hybridization use, make alcohol solutions and PBS in RNase-free water.
